

# PD36-05 Mid-Infrared Photodiodes

## Description

Photodiodes PD36-05 series are fabricated from narrow band-gap InAsSbP/InAs-based heterostructures lattice matched to InAs substrate, and are designed for detection of light signals in Mid-Infrared spectral range with cut-off wavelength around 3.6  $\mu\text{m}$ .

## Features

- Diameter of photosensitive area: 0.5 mm
- Fast Response: <50 ns
- Package: TO-18

## Applications

- Industrial Process Control
- Sensor development
- Medical diagnostics

## Specification

### Recommended modes of PD operation

We recommend using photovoltaic mode, when PD is used under no reverse bias.

PD used as a current source (photovoltaic mode)	PD used in a photoconductive mode (under reverse bias)

## Precautions

Photodiodes are polarity sensitive. Please note the anode of PD is marked with a RED dot. Check all polarity connections before using the device. Please do not connect the PD to the multimeter.

The MID-IR photodiodes are ESD (electro static discharge) sensitive and should be handled with the proper ESD protection environment.
